Project Management

Helping to deliver your requirements through effective Project Management

There are numerous complex and often daunting challenges facing public and private sector entities undertaking capital projects. Some of these include:

- Designing a capital programme strategy that best fits organisational strategy
- Allocating limited budget amongst competing needs
- Managing a diverse portfolio of projects at various lifecycle stages
- Ensuring the best option has been identified for feasibility
- Understanding the uncertainty (risk) associated with project returns
- Having confidence that full value has been identified
- Ensuring the business case is robust
- Having confidence that projects have been adequately optimised for value
- Ensuring integration across phases
- Ensuring readiness for day one operation
- Appointing professional teams and advisors
- Defining the project design and construction parameters
- Creating cost and schedule forecasts for the entire project lifecycle
- Developing a risk management programme
- Procuring and managing delivery of contractors and the design team
- Controlling costs and scheduling
- Maintaining accountability
- Avoiding and resolving project disputes and liabilities
- Ensuring regulatory compliance and approvals
- Delivering a quality project
- Ensuring project governance
- Project reports and reviews
- Change control and performance assessments
- Achieving operational readiness
- Project sign off and settlement of final accounts

How we can help you

We understand that sponsors responsible for the financial and operational aspects of complex capital construction projects need a trusted partner to help them navigate resource challenges within their organisation.

Through practical and proven experience our team of experts understand what contributes to successful project delivery and can provide the right blend of technical and professional skills and local market knowledge to achieve this.

Our team assists in ensuring growth and development by:

- Making the right case for investment by assisting with robust project evaluation and business case development
- Using capital effectively, efficiently & safely to optimise the capital investment portfolio and measure for success
- Setting our clients up to succeed by creating teams that deliver outcomes and maximise the value of the Engineering, Procurement, Construction and Management relationship
- Effectively structuring and procuring the project
- Creating and maintaining oversight and visibility, keeping a watchful eye on time, cost and quality through fit for purpose processes, controls and systems
- Delivering an operation, not just an asset by supporting the transition from the build environment to operations, and assisting in managing and monitoring throughout the Operation's Maintenance, Decommissioning and Re-Commissioning phases of a project
