Datasym stockade

Stockade SQL / Lite / Web App

Stockade is a simple to use yet comprehensive platform that gives you full control of how you use POS.
The platform has three variants – Stockade SQL, Stockade Lite, and the Stockade Web App. All make maintaining control of your business as straightforward as you always hoped it would be.

Stockade SQL	Stockade Lite	Stockade Web App
Stockade SQL gives you full stock control, customer files, and time and attendance routines as well as EDI links so you can share information with suppliers.	Stockade Lite offers great functionality but removes stock control for those who do not require it.	Stockade Web App provides dashboards, real-time sales, maintenance and real-time sales consoles from any web browser, on any device or platform.

All three Stockade variants can have data hosted in the cloud to remove concerns over in-house server storage and maintenance.

Datasym

Benefits of Stockade to your business are enormous and include:

Centralised Maintenance

This streamlines your operation whether it is a single or multi-site enterprise. The flexibility of this system enables you to control different prices across multiple sites from one system.

Button Maintenance

You can customise button sizes and images, create an unlimited number of sets, and have freedom to link them to specific terminals or standardise across branches.

Assemblies and Ingredients

There are no limits as to what this system can track and it is invaluable if your stock is computer components or the ingredients to make a steak and ale pie. One sale registered at your POS will instantly update your stock information giving you 100 per cent accurate information 24/7.

Bi-Directional Comms

Stockade and your POS devices can be in constant communication so if you want to change a price in the middle of the day you can, and if you need sales figures at the drop of a hat there will be no guesswork, forecasting or estimating.

Comprehensive Multi Site Stock Control

Stockade SQL covers stock control, automatic ordering, goods receipts, transfers and requisitions and much more, whether you run a single site or hundreds of sites nationwide. Once you have finished a batch of recipes, Stockade will instantly update, increasing completed stock and reducing ingredient stock.

Secure Access

You have complete control over who you give access, how much access you provide, and where users are able to access from.

Comprehensive Reporting

You tailor how many reports you wish to access from one to literally hundreds. These are also available via the Web App so you can see them on your smartphone night and day.

Graphical Dashboards

Easy to understand and visually appealing, the Stockade Web App provides you with up-to-the-second graphical comparisons of vital areas including weekly sales, department breakdowns, hourly sales, sales by payment method, and best sellers.

Stockade Web App.

You can access sales, dashboards, stock routines and maintenance via the Stockade Web App as well as Windows-based client applications. Other modules available include Cash Office and Report Distribution.
