

Here Are 5 Reasons Aluminum Sign Board Has A Leg Up On The Competition

1. It's One Of The Strongest Materials In The Sign Industry

Aluminum is well-known as a strong material with stiffness. While it's very light and thin It is strong and durable, and the more thick it is, the stronger the strength of the panel. It is available in 5 different thicknesses, though three are the most popular.

Small signs that are thin (like real estate signs) are generally made from the .040 gauge. Sturdier street signs (like the stop signs you see in your neighborhood) are made from .080 thickness of aluminum.

The most robust and dense thickness, .125, is reserved for signs that are heavy-duty (like hazardous materials and evacuation signs found at construction locations). If you require an option for a sign material that's solid and solid – one that will not split, warp or bow or break [aluminium sign board](#) is a good option.

2. It's Remarkably Affordable

In terms of the strength and long-lasting, you'd think this material for signs to be among the most costly. It's not. In fact, it's among the most affordable. In comparison to substrates such as dibond printing, and even plastics, aluminum has continued to outdo the rest in terms of pricing. It's durable, strong and inexpensive!

3. It Gives A Very Professional Finish

In this case the word affordable does not always mean cheap! Aluminum signage may not cost you a lot but it will appear as if it did. Metal finishes generally provide a classy professional look.

It doesn't matter if it's brushed polished or mirrored aluminum signs stand out! This is why it's frequently seen in offices for professionals such as courts, attorneys' offices as well as higher education facilities and so on. Its glossy, shiny finish is appealing!

4. It's Very Versatile

While acrylic and PVC aren't recommended for outdoor signage Aluminum is. While most kinds of wood are suitable for mounting both outdoors and indoors however, not all are strong enough to stand up to the harshest weather conditions without edge-capping and treatment.

[Foamex board printing](#) is great for outdoor and indoor signage! It's weatherproof and waterproof, making it weather-proof. That's why it's a perfect substrate for street signs.

5. It's Super Easy To Customize

Do you need to screen print your logo on aluminum? There's no problem. Are you looking to apply colored vinyl letters or decals? There's no problem. Do you want to cut it into a distinctive shape or cutouts that are specialized?

Again, no problem. Foamex signs are incredibly easy to modify! It is possible to make your signage stand out with a touch of imagination. Aluminum is the perfect canvas for all your creative ideas!
