

**A dementia diagnosis does not
have to mean leaving your home**

**With the right help and support,
you can continue to live safely and
independently in your own home
for as long as possible.**

Your home is the familiar, safe place that is filled with many happy memories and treasured possessions. Everyone would like to stay living in their own home for as long as possible, and a premature move, for example to live with a son or daughter or in a care setting, may feel like a loss of freedom.

TextCare can help you to live safely and independently in your own home for longer.

Meeting your support needs

TextCare is a home monitoring system that provides a way for your loved ones to remotely view how well you are coping at home. It can enable them to identify if and when you might need a little extra help, without being intrusive and asking you lots of questions about your lifestyle.

By looking at your daily activities and routines, together with assessing your capabilities, your loved ones can ensure that you receive the right help for your unique needs.

Protecting your privacy & dignity

There are no cameras or listening devices used, just discreet sensors that are placed around your home. This ensures that you keep your privacy and maintain your dignity.

Each sensor sends monitoring data securely to a computer, where only people who you know and trust will be able to view it, so it remains completely confidential.

TextCare can be quickly and easily set-up by a loved one in just a few minutes, so you will not have to worry about disruption or strangers coming into your home.

Falls

Peace of mind for you and your family

As dementia can reduce your attention and concentration, it may mean that you are more likely to fall over or have an accident. TextCare's Pendant Sensor can automatically detect falls and it has a panic button which can be pressed in case of an emergency. In both instances, your loved ones will be sent a warning alert text message to their mobile phones, enabling them to quickly respond to you with help. The Pendant Sensor is unobtrusive and can be carried in a pocket or worn as a necklace.

Your loved ones can also set-up a range of other alerts that can tell them if something out of the ordinary has happened, such as no movement in your kitchen in the morning, when you are usually up and making a cup of tea. This can give peace of mind to you and your family that help will always be there if you need it. Having the ability to check that you are following your normal daily routines can also reassure your loved ones that there is nothing to worry about.

- Low-cost
- Easy to set-up
- Discreet & unobtrusive
- No phone line or internet required
- No cameras or listening devices
