COMPANY OVERVIEW

Ful-ton's trained service department can deliver a service package tailored to suit your needs.

Our multi skilled professional service engineers are electrical/mechanical and hydraulic specialists combined into one.

Our technicians are available to be despatched through our service centre to deal with the maintenance requirements of our customers.

Backed by the latest service technology to assist in the prompt diagnosis of faults our aim is to keep your materials handling equipment running with the minimum of down time to allow you to concentrate on your own core business.

OUR SERVICES

As well as breakdown cover we offer the full range of services to our clients.

SERVICING/PREVENTATIVE MAINTENANCE

Our servicing and maintenance checks will help maintain a high level of performance from your fork-lift truck, help prevent breakdowns and will also allow you to keep your trucks in line with HSE and local authority legislation.

The 60 point checklist we provide after the completion of any truck service gives our customers a record of work carried out, current truck state and itemise any remedial work that is required in the future. This allows the customer to budget for repairs which have to be carried out whether on site, or at our depot.

Our service engineers will always arrive equipped to deal with most issues there and then rather than having to transport the truck to our depot. This ensures that we always take the most cost efficient and non intrusive course of action for our customers.

FULL MAINTENANCE

A Ful-ton full maintenance package is available to those customers who own their trucks and have the need for tightly controlled budgets. This service is designed to remove much of the responsibility of managing your truck.

A full maintenance contract includes all maintenance and repairs which are required due to fair wear and tear at an agreed fee. A bespoke agreement can be arranged to suit your requirements by allowing you to choose from a shopping list of specific terms so that you'll always get exactly what you need. No more and no less.

CONTRACT HIRE

Contract hire is widely seen as the most popular way to operate materials handling equipment. The customer pays a fixed monthly rental which includes maintenance, servicing and a variety of other features and benefits.

Contact hire also allows you to offset 100% of rentals against taxable profits; take advantage of 'off balance sheet' funding; enjoy usage benefits without ownership risks; and use your capital in other areas of the business

This facility can be offered on new and used materials handling equipment to give our customers cost-effective and tax-efficient solutions.

THOROUGH EXAMINATION INSPECTIONS

To maintain acceptable health and safety standards, thorough examination inspections are now compulsory for all companies with materials handling equipment and Ful-Ton Forklifts can offer support at all levels to help companies comply with these regulations.

These inspections will also help you to continue getting the best performance from your materials handling equipment so that your investment works as hard as possible for your business.

TRUCK SALES

We offer a full range of new and reconditioned trucks from 1 Ton capacity to 40 Ton capacity. All our trucks are offered with either our own in house warranty or manufacturers warranty. We can also offer insurance backed extended warranties on our products.

NEW TRUCKS

Ful-ton Fork-lifts are proud to be associated with Doosan, one of the largest supply chain businesses in the world.

Doosan Heavy Industries purchased a controlling share in the Daewoo fork-truck business in 2005 from the South Korean government to form Doosan Daewoo. They then became Doosan Infracore Ltd, a multinational corporation which, as well as building some of the world's best quality industrial machinery, has a massive portfolio of other products from military tanks to shopping malls.

Daewoo was and still is a well known brand name which originally started producing fork lifts in the early 1960's. They entered into a 10 yr agreement to produce fork-lifts under the Caterpillar brand in 1983 which gave the company recognition throughout the fork lift industry for producing a tough and durable product.

The Doosan Pro 5 series fork lift launched in 2007 has utilised these recognised parts and expanded their product range which covers over 100 different models.

This range now offers the latest in high performance and low cost reliability and is in the top five best selling fork-lift truck ranges in the UK.

As well as the option of integral fork sideshift, longer lasting oil cooled disc brakes and auto tilt levelling, the range also comes with a 3yr warranty as standard.

In 2008 Doosan have also introduced their GX range of fork lifts based on the chassis design of the Pro 5's predecessor. The GX is available in Diesel and LPG from 1.5 - 3 Ton capacity and is designed for those customers with lighter use.

Through our Doosan partnership Ful-ton also offer a full warehousing range of fork-lifts and specialist equipment such as electric pallet trucks, reach trucks and high/ low level order pickers. Furthermore the Doosan dealer network also allows Ful-ton to offer a nationwide service with 27 dealers strategically placed throughout the UK.

USED TRUCKS

In the last 30 yrs the Ful-ton name has become synonymous with quality reconditioned forklift trucks.

Our dedicated workshop staff take pride in their ability to rejuvenate used trucks and significantly extend their life span to a standard that comes with a full parts and labour warranty. We also have a large stock of quality pre-owned and ex-hire trucks available for sale or hire that can be viewed on www.ful-ton-forklifts.com

SPARE PARTS

We offer a full spare parts service through our sister company, Tryus Spare Parts Ltd. Tryus provides parts for most makes and models of forklift whatever their age and operates with the largest suppliers of genuine forklift spare parts in the world.

Pictures of spare parts can be viewed online prior to ordering to provide piece of mind for the customer before they place an order. Once you're happy just ring our parts desk with your truck details and the relevant part number or description to see what cost savings we can offer.

SHORT & LONG TERM RENTALS

Whether it is one lift, one day, one week or one month we can supply a truck to suit your needs. They are supplied quickly and safely on our purpose built transport vehicle which will allow us to deliver your truck where and when you need it.

AWARDS

For four years The Forklift Truck Association have awarded Doosan for the quality of their trucks in the areas of Safety and Ergonomics.

SPECIALIST EQUIPMENT

The uniquely designed Aisle-Master fork lift can do the work of both a conventional fork lift and a reach truck, with the flexibility to work in narrow aisles, plus unload trucks in the outside.

This unbeatable manoeuvrability is achieved through Aisle-Masters versatile articulated design, providing faster load cycle times, minimising aisle ways and reduced driver fatigue. Available in AC electric or LPG powered versions, the efficiencies gained ultimately result in increased profitability.

Combilift fork lifts are designed to handle long loads safely using patented, leading edge technology. They are equipped with a unique 4-way steering system that allows the units to travel sideways easily with long loads that are wider than the goods doorways. This system gives the user multi-directional capability whilst delivering excellent space savings.

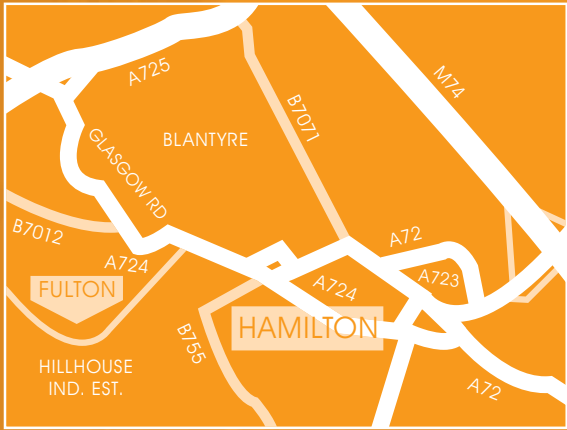

It is available as electric powered and also with a fuel efficient LPG or diesel engine, eliminating the need for an indoor and outdoor fork lift.

TRAINING

Accidents resulting from the use of forklift trucks are not uncommon in industry. The most usual cause of them is poor or non-existent operator training. The law requires such training to be done and Ful-Ton Forklifts can provide your drivers with professional training, allowing you to rest easy that your employees and equipment are safe and that your organisation is compliant with training regulations.

We can also arrange short assessment courses to judge the ability and training needs of experienced operators who have had limited formal training.
