- Religious and Places of Faith

Environmental Acoustics

- Planning Applications
- Construction Noise Monitoring
- Live Events and Festivals
- Industrial Noise
- Noise at Work Assessments

Specialist Acoustics

- Public Address Systems (STIPA)
- Advanced Acoustic Modelling
- Acoustic Research

About Prism

Prism Acoustics was incorporated by Stuart Cumming in March 2017. In that time it has been involved in the acoustic design for dozens of successful developments in the Midlands and beyond.

From the beginning the Company was set up to take advantage of the latest technological developments, like machine learning, and cloud computing.

Much of the software used by the Company is developed in-house, with room acoustic software "PRISM", being made publicly available in the near future.

These advancements allow Prism Acoustics to pass savings on to clients, providing a blend of high value and quality.
