Hydranal™ Reagents

Leading the way in innovation and safety since 1979, Hydranal reagents for Karl Fischer (KF) titration have been recognized as the most trusted brand in the industry.

Hydranal is a line of titration reagents and standards designed for accurate water determination. If you work in an industry where it's important to know the precise water content of your samples, Hydranal can help you achieve that accuracy. By using Hydranal products, you can streamline your titration process, improve the reproducibility of your results, and have confidence in the quality of your measurements. Hydranal can help you make informed decisions based on reliable data, which can ultimately save you time, money, and resources.

Advantages of HYDRANAL Reagents:

- High titration speed
- Stable end points
- Accurate results
- Long shelf life
- Wide applicability
- World leading technical support

HYDRANAL-Water Standards

Quality management plays an important role in Karl Fischer titration. Calibration, validation and inspection of analytical instruments and reagents is performed with a specific amount of water, either pure water or water standards. We therefore recommend Hydranal Water Standards with an exactly confirmed water content for:-

- Titer determination
- Monitoring precision and accuracy
- Validation and inspection of Karl Fischer titrators according to ISO, GMP, GLP and FDA guidelines
