

WINDOWS & DOORS

Welcome to 5 Star Windows & Conservatories

We're proud to be a family business and your Conservatory Outlet dealer for the Midlands. The 5 Star name has been famous for fitting replacement windows, doors and conservatories in Kidderminster, Worcester, Stourbridge, Bromsgrove and the surrounding area since 2002.

Satisfied customers recommend our services to their friends, family, work colleagues and neighbours every day and now our new showroom - the biggest and best in the area - showcases everything that we do, so it's definitely worth a visit. Situated on the Worcester Road in Kidderminster this luxury indoor showroom is the home of inspiration, featuring our finest array of windows, doors, roofline and conservatories in a wonderful choice of styles and colours.

In the centre of our inspiring display area is a miniature house, which has been cleverly created to show combinations of front and back doors, windows, security locking, and everything that goes into a full size installation. You'll also find fantastic windows set into lifestyle extensions along with bi-folding, French and patio doors in a choice of colours and finishes.

Please come and have a look around and be inspired, you will be so very welcome.

CASEMENT WINDOWS

Contemporary UPVC casement windows - side hung or top hung - owe their popularity to the utter simplicity of their design and suitability to everyday living.

The window frame and sash has been specifically designed and sculptured to complement residential properties and there is a broad colour palette to choose from. Casement Windows are the automatic choice for many homeowners, not least because they can also be manufactured to A-rated energy efficiency standards.

Casement Windows tick all the boxes by offering style, security and a saving on your energy bills.

Quality products are installed by expert installers...

so your new windows will perform for many years to come.

Perfect for those hard to reach places...

cleaning your own windows has never been so easy with Tilt & Turn Windows.

SECURE

In the closed position Tilt & Turn windows provide formidable security and look very similar to casement windows.

TILT

Turning the handle 45 degrees allows you to tilt the window sash inwards to achieve safe and secure ventilation.

TURN

Turning the handle 180 degrees allows the windows to be opened fully inwards, much like a side hung casement window.

TILT & TURN WINDOWS

Tilt & Turn UPVC windows offer the advanced versatility that modern day living often demands. Turn the handle once to tilt the top of the window inwards, allowing secure ventilation.

Turn the handle further and the whole window opens inwards like a side hung casement window, allowing more rapid ventilation, an emergency escape exit and a simple way to clean your windows on both the inside and outside without even leaving the house.

ALUMINIUM WINDOWS

There's a sense of kudos about contemporary aluminium windows that goes far beyond kerb appeal. Sleek sightlines facilitate a bigger glass area, letting in considerably more light and making your rooms seem more spacious.

Impressive powder coated colours or sublimated woodgrain finishes add to the sophistication whilst the longevity and performance of aluminium as a material gives these windows substance as well as style.

Aluminium is completely recyclable but, with a long recommended lifespan, you need not worry about that for some time.

**Enjoy the best
of both worlds...**

*authentic looking UPVC
vertical sliding windows
are very low maintenance.*

VERTICAL SLIDING SASH WINDOWS

For some the character and charm of a vertical sliding 'sash' window is simply unrivalled. Of course this style of window was originally made from timber but our UPVC alternatives marry practicality with charm and are low maintenance, secure and thermally efficient.

A vertically sliding window features two sashes which each tilt inwards independently of one another, and slide upwards and downwards as required.

The resemblance is remarkable...

traditional Heritage Windows have been modelled on their timber predecessors.

HERITAGE WINDOWS

You could be forgiven for thinking that Heritage Windows are manufactured from real wood – a lot of people do. Using the blue print of traditional timber windows, Heritage Windows are a near exact match in that the frames are mechanically jointed instead of welded and the window sash sits flush with the frame that houses it.

Butt hinges, peg stays and 'monkey tail' handles add to the authenticity of this style which boasts its own range of unique colours that mirror painted timber.

This unique proposition is appealing to homeowners who want to maintain or restore the period charm of their home.

STEEL REPLACEMENT WINDOWS

Although not a mainstream product nowadays, steel windows were once the norm and remain in-situ today in many homes from a certain era. Steel windows have remarkably slim sightlines which are emulated by a second aluminium system that we offer which is much slimmer than our standard range of contemporary aluminium windows. Steel replacement windows are not suited to every property style but they are ideal for use in window apertures with stone mullions and look stunning as a result.

Windows are a major architectural feature...

Choosing the best style for your property can dramatically increase its kerb appeal.

REPLACEMENT DOORS

Every door on your property must welcome guests and deter would-be intruders. It must offer uncompromising but unobtrusive security and complement other features of your home.

- 18 COMPOSITE
- 20 UPVC
- 22 ALUMINIUM
- 24 FRENCH DOORS
- 26 PATIO DOORS
- 28 BI-FOLDING DOORS

A composite door looks so in keeping with its surroundings...

giving you so much more to come home to. Its tangible weight inspires confidence and its unrivalled appearance enhances kerb appeal.

COMPOSITE DOORS

A composite door looks so immediately in keeping with its surroundings and becomes the focal point of a house. It draws upon the strengths of several different materials to look like a traditional timber door, perform like a modern UPVC door and remain as good as new for many years to come.

Essential security features such as a multi-point lock are concealed whereas patterned glass, door knockers, letterboxes and other functional but decorative features are fully on show.

UPVC DOORS

Lavish or unfussy in design, a UPVC residential door is an easy and effective way to revitalise the appearance of your home. There are numerous custom-built panel styles available that accommodate a whole host of different size, shape and configurations of simple, bevelled and patterned glass designs which add character.

Of course, security and thermal efficiency are also covered too by the state-of-the-art hardware and modern materials that complete a UPVC residential door.

Patterned, leaded and bevelled glass designs really bring a UPVC door to life.

Our stunning doors are all made-to-measure

ALUMINIUM DOORS

An aluminium residential door is the perfect complement to our contemporary range of aluminium windows or our traditional steel replacement range. Aluminium, like UPVC, does not absorb water, warp, twist or decay and is therefore a long term solution which will remain completely functional and looking great for many, many years.

Powder coated aluminium colour finishes are distinctive and hardwearing, and the sublimated woodgrain finishes of walnut, rosewood and oak are second only to natural wood itself.

The quality of powder coated aluminium colour finishes is clear to see and feel.

Turning a doorway into a grand opening...

*French Doors look equally at home when
installed internally between rooms.*

FRENCH DOORS

French doors are a timeless favourite and are featured on millions of homes across the country for a reason – they are tried and tested, simple yet effective, and perfect for so many applications.

With French doors you get the choice between opening one of the doors for quick access and part ventilation, or opening both doors to double the impact. In locations where gusty wind may be a problem you can opt for restrictor hinges which prevent the open door from dangerously swinging open.

PATIO DOORS

Internal or external space may be at a premium and, if so, a patio door is the sliding solution which allows considerable access with minimal fuss. In the closed position a patio door boasts a large expanse of glass which lets in floods of light from the outside-in, and facilitates excellent views from the inside-out.

The sliding door then almost floats along stainless steel runners meaning that furniture and other objects can be positioned in close proximity to the door without impeding its operation.

Nothing else can really compare...

a room that boasts a bi-folding door will quickly become the most popular place to be.

BI-FOLDING DOORS

The total flexibility, panoramic views and incredible access given by bi-folding doors is unmatched by any other style of door. In seconds you can open up a full wall and remove the divide between the indoors and outdoors, creating a unique atmosphere that is perfect for living, entertaining and enjoying.

The concertina operation of a bi-folding door is smooth and graceful, making it a joy to use, and you can also incorporate a 'passenger door', which opens like a typical door, for everyday comings and goings.

PRACTICAL

Bi-folding doors are available in numerous configurations, consisting of anything from two panes to seven. Each style of bi-fold door incorporates a 'passenger door' which functions like a standard hinged door for everyday comings and goings.

EFFORTLESS

Bi-folding doors are simply a pleasure to use thanks to the ease of their concertina operation on gliding rollers. If you're preparing to entertain it will take a matter of seconds to merge your indoor space with your garden. And if the weather takes a turn for the worse it is just as easy to reinstate the boundary.

CONTEMPORARY

Whether open or closed bi-folding doors enable excellent panoramic views and are certainly the latest concept in luxury living. Homes of all shapes and sizes are now adorned with this impressive style of door which changes the way that people view and use their home.

SPECIALIST SERVICE

Windows and doors are not an everyday, regular purchase for most people which is why we pride ourselves on offering friendly, expert advice about improving your home.

- 35** GLAZING OPTIONS
- 36** COLOURS & WOODGRAINS

BUYING WINDOWS & DOORS

When you're investing in new windows and doors, it's important to keep in mind your reasons for doing so. Are your current windows simply tired and ineffective, or are you addressing a particular issue like insulation, security, kerb appeal, or all three?

Your design consultant will help you to get the absolute most from your investment.

FUNCTIONALITY

Windows can open from the side or from the top, they can tilt and turn or vertically slide, while doors can now slide and fold. Whichever option, or combination of options that you choose, it is important that your new windows and doors work for you - with your lifestyle, property and space that you have available. Give your design consultant as much relevant information as possible so that they can offer you the most suitable solution.

ENERGY EFFICIENCY

By deciding to replace your windows and doors, you've given yourself the opportunity to significantly improve the efficiency of your home, lower its running costs and reduce your household carbon footprint. The energy efficiency of windows - how much or little heat they allow to escape - is scored using an energy rating scheme akin to that used for electrical and white goods, with an 'A-rating' being among the best ratings achievable.

SECURITY

Security will no doubt be high on your agenda. The materials, components and fabrication processes used to manufacture windows and doors will all impact upon the level of security provided, as will the quality of the installation. High quality, modern windows and doors should all provide impressive security as standard but 'Secured by Design' windows and doors which are manufactured to British Standards and approved by the UK Police may be another option to consider for installation in particularly vulnerable locations such as ground floors.

APPEARANCE

With various different window and door styles there are numerous options with regards to aesthetics and appearance. Generally speaking you'll need to think about what colour you want your frames and sashes to be - do you want them to be the same colour on the inside as the outside - and how you want them to be glazed. In some rooms you may need a patterned glass for privacy reasons, or you may be thinking about having leaded or stained glass as opposed to simple clear glass.

QUOTES

Windows and doors are made-to-measure products and it is often very different to compare two or more prices on a truly 'like-for-like' basis. Even if two examples look exactly the same, the respective suppliers may use different quality materials and components, their company and product accreditations may vary, and the terms of each guarantee will likely differ. Only you will know what your gut feeling tells you when it comes to choosing a supplier, but the cheapest option is not always the best value.

GUARANTEES

It's a given that modern windows and doors are designed to look great and function well for a very, very long time. Post-installation it is sometimes necessary to make small remedial adjustments to ensure that this remains the case and it is therefore essential that you are completely familiar and comfortable with the terms of the guarantee that your chosen supplier provides including validity period and exclusions.

REVIEWS

Read what other homeowners and previous clients thought of your shortlisted suppliers by asking to see their reviews and testimonials - after all, these people will have been through the same process that you are about to embark on. Make sure that reviews and testimonials are recent, genuine and relevant to the product that you are looking to purchase.

FRAME OPTIONS

What makes one window or door system different from another, and perhaps more suited to a certain type of property? Subtle differences in the dimensions and contours of the window and door frame type may seem inconsequential but, in reality, make a huge difference to the overall appearance when they are installed.

UPVC

Low maintenance, long lasting and very affordable, Classic UPVC is the automatic choice for many homeowners. This frame option is also one of the main contributing factors to the impressive thermal efficiency of UPVC windows and doors, which retain more of a home's natural heat and reduce the owner's reliance on central heating. The contoured profile features a curved external bead and the overall effect is a charming, sculptured frame which is perfect for domestic applications and can be easily shaped and curved into arched windows and doors.

ALUMINIUM

Contemporary Aluminium is all about sleek sightlines and maximum glass areas. There's a sense of kudos about Contemporary Aluminium that goes far beyond kerb appeal and those who set out for aluminium windows and doors rarely change their mind. The intricate contour on the outside face of the profile is subtle and the chamfered bead crafts clean sightlines. Contemporary Aluminium is available in a range of powder coated finishes which result in true, deep colours or you may prefer the look of a sublimated woodgrain finish which is second only to natural wood itself.

HERITAGE

You could be forgiven for mistaking Traditional Heritage windows and doors for authentic timber products; such is the replication of the aesthetics in style, dimension and finish. The window sash sits flush with the window frame in the closed position - a standout feature of 19th Century timber windows. However, the Traditional Heritage frame is actually a composite material which boasts 21st Century advantages such as a low maintenance finish, integral thermal efficiency and durability. Traditional Heritage windows and doors are mechanically jointed as opposed to welded and this is one of several reasons why these windows can be considered for use in conservation areas.

GLAZING OPTIONS

Once you've chosen the most suitable frame option you once again have the luxury of choice with regards to glass. The technical specification of the glass will largely depend on whether you opt for Energy Rated Windows, but there's also wide variety of aesthetic options such as leaded glass and astragal bars.

DOUBLE GLAZING

Double glazing has long been, and remains, the most suitable specification of glazing for the majority of domestic properties, so much so that many people simply refer to windows as 'double glazing'. Double glazing owes its superiority over single glazing to the insulating cavity that is created by the two panes of glass, the intelligent properties of the glass itself and other materials and components that make up the 'sealed unit'. Energy efficient A-rated windows are easily achieved with a double glazing specification.

TRIPLE GLAZING

As its name suggests triple glazing comprises of three panes of glass that make up the complete sealed unit. Triple glazed windows and doors look all but identical to those which are double glazed and they offer the same fantastic benefits but, crucially, triple glazing provides a greater level of energy efficiency. The extra pane of glass used in triple glazing creates a second insulating cavity which also helps to further reduce draughts and cold spots in homes that are subject to particularly extreme and cold weather conditions.

PRIVACY GLAZING

Bathroom windows and front doors are prime examples of where privacy glazing is quite often essential in order to let in natural light without compromising your privacy. There are a number of varied yet appealing patterned glass designs which obscure an onlooker's view so that you can feel comfortable in your home. Patterned glass can be used in both double glazed and triple glazed sealed units so energy efficiency and noise reduction need not be sacrificed.

COLOURS & WOODGRAINS

Across the Classic UPVC, Contemporary Aluminium and Traditional Heritage ranges there are literally hundreds of colours, finishes and combinations to choose from. Even if you already have a very good idea about what you're after, there's still plenty to consider such as a whether you'd prefer a textured woodgrain or a smooth surface finish, and whether you want the same colour on both sides of the frames, or different colours on the inside such as Oak externally and White internally. The common denominator of every colour and finish across the Classic UPVC, Contemporary Aluminium and Traditional Heritage ranges is durability and long lasting charm. And if you've ever had timber windows before you'll realise what a relief it is to know that you'll never have to repaint or reapply any of these colour finishes.

UPVC COLOURS

Classic UPVC can be whatever colour you want it to be: a specially developed paint application process can be employed to match even the most unique colours. In the standard colour range, however, are timeless classics such as White, Whitegrain, Cream and Chartwell Green. Emerging favourites include Black, Grey and Irish Oak.

ALUMINIUM COLOURS

The 11-stage powder coating process that Contemporary Aluminium is subject to induces strong paint adhesions and results in a true colour which is sheer quality to the look and touch. Similarly Contemporary Aluminium woodgrain finishes benefit from a unique process known as sublimation which results in Walnut, Rosewood or Oak appearances which are utterly convincing and second only to real wood itself.

HERITAGE COLOURS

Traditional 19th Century timber windows were very often painted so a small but perfectly formed range of heritage paint colours can be specified with these timber alternative windows. Painswick, Clotted Cream and Cotswold biscuit will whet your appetite and give you a flavour of the kinds of colours that are available, whereas other options such as Corse Lawn and Eclectic Grey. Equally stunning natural wood finishes exist in the form of English, Irish and Silvered Oak.

SEEING IS BELIEVING

Even the most accurate printing processes only do partial justice to the colours shown in this brochure. And it would be quite simply impossible to show every single colour available on one page. To see a particular colour for yourself, or to explore the full colour range in its entirety, please visit your local showroom or speak to your design consultant.
