OLYMPUS®

190 HD Endoscopy System

The 190 Series EVIS EXERA III delivers high-definition imaging for the best view of your subject. **Narrow-Band Imaging (NBI)** highlights blood vessels so you can see the most minute irritations and bleeding areas. The CLV-190 light source is fully connected to the CV-190 processor so the need for a video connecting "pigtail" with 190-series endoscopes is no longer needed. CV-190 had a connection slot for a video connector to use pre-190 Olympus videoscopes with the system. **One (1) year manufacturer's warranty**.

PCF-PH190L Slimline Veterinary Colonoscope

The EVIS EXERA III PCF-PH190L colonovideoscope delivers **HDTV** image quality and **Narrow Band Imaging (NBI)** for enhanced visualization in an ultra-slim scope. An outer diameter of only 9.7 mm along with **Responsive Insertion Technology (RIT)** helps ease insertion.

One (1) year manufacturer's warranty.

GIF-XP190N Slimline Veterinary Gastroscope

The EVIS EXERA III GIF-XP190N Veterinary gastroscope delivers excellent image quality and illumination, enhanced **NBI** capabilities, and a wide 140° field of view. Its 5.4 mm outer diameter makes the GIF-XP190N a powerful tool for diagnostic endoscopy whenever an ultra-slim scope is needed.

One (1) year manufacturer's warranty.

URF-V2 Slimline Veterinary Video Ureteroscope (2.8mm)

The URF-V2 achieves a new standard in smooth insertability and high image quality. As slim as a fiberscope, yet with the image quality of a videoscope, every feature contributes to this scope's versatile performance. Improved visualization, facilitated maneuverability and reduced operator stress are now within reach.

One (1) year manufacturer's warranty.

MAJ-1430 Video Adapter

Connect your pre-190 Series video endoscopes to the CV-190 video processor to expand the flexibility of your 190-Series System. Works with all Olympus® videoscopes from 100-180 Series (this adapter will also connect to the CV-180 video processor) The modern version of the 100-160 series "pigtail" connectors.

HDTV NBI

NARROW-BAND IMAGING

With standard white light

With NBI Activated

Endoscopy Support Services, Inc. (ESS) has an exclusive agreement with Olympus America to purchase products directly for U.S. Veterinary Consumers.

★ FOR SPECIALTY/EXOTICS ★

VISERA OTV-S7Pro
High-Definition Camera Processor

Introducing the OLYMPUS OTV-S7 Pro HD Endoscopic Camera System.

This system provides 2 types of image structure enhancement:

1) Type A for observation of larger mucosal tissues with high contrast
2) A new Type B for observation of smaller tissues, such as capillaries, additionally assisted with NBI.

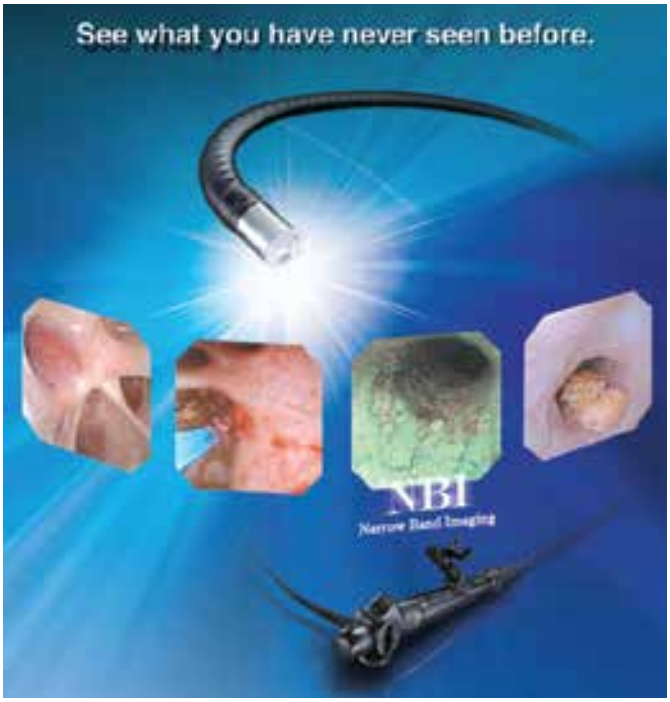

- Equipped with high-resolution HDTV imaging capability to assure the best possible image quality for endoscopy and laparoscopy and enabling enhanced observation of capillaries.
- Narrow Band Imaging (NBI) to enhance the visibility of fine capillaries and the mucosal tissues.
- Electronic magnification enlarges moving or still images by 1.2x or 1.5x with no loss of quality and built-in moire-filter.
- Compatible with 180 Series OLYMPUS Bronchoscopes & the URF-V 3.3mm Ureteroscope.
- Surgical endoscopes (EndoEYE, 1CCD/3CCD camera head, and VISERA videoscopes) for Laparoscopy.
- Automatic Iris eliminates the need for switching between Peak and Average required in conventional manual adjustment.
- HD/SD SDI output for deterioration-free images to be captured on a USB appliance or Workflow systems like iCap.
- Available Autoclavable HD Camera head for amazing images and faster turnaround times between procedures. Using the HD camera head, rigid and fiberscopes can be used on this platform.

OTV-S7Pro-H-HD-12E Camera Head

With 1080 effective scanning lines of picture information, the high-definition camera head delivers picture quality that is more than twice as good as conventional TV. Images are smooth and clear, with reproduction so accurate that details and colors remain sharp and life-like.

Connects to the VISERA OTV-S7Pro, CV-180 & CV-190 Processors.

URF-V
HDTV 3.3mm Diam. Uretero-Reno Videoscope

See what you have never seen before.

Bright, vivid imaging, NBI allows for better diagnosis and precision treatment. The new ergonomic handle, super slim 3.3mm diameter with a biopsy channel, amazing 180' Up and 275' Down angulation plus 90 degree rotation makes it ideal for Cystoscopy, and other procedures such as retroflex rhinoscopy, bronchoscopy, etc.

Call or email us for more details. P: (845) 277-1700 • E: sales@endoscopy.com

Connects to the VISERA OTV-S7Pro, CV-180 and CV-190 Processors.

URF-V Specifications:

Viewing: Field of View: 90°
Depth: 2~50mm

Diameter: 3.3mm (9.9Fr.)
Working Length: 670mm (67cm)
Biopsy Channel: 1.2mm (3.6Fr.)
2-Way articulation:
Up: 180°/Down: 275°

VetSEAL™

Mono & Bipolar Sealing System for Veterinary

The **VetSEAL™** is an advanced electrosurgery generator from the human market with a **fully autoclavable** bipolar thermo-fusion hand piece for sealing vessels. Vessels are permanantly sealed without leaving any foreign material, such as sutures in the body.

Thermo-fusion of vessels with the VetSEAL™ is fast and secure and can be repeated as many times as necessary during the procedure.
