

GP LAM® LVL

GP LAM® LVL FEATURES & BENEFITS

- Resists shrinking, warping, splitting and checking
- 2.0E has exceptional design values for bending, stiffness and shear strength
- FiberGuard® sealant provides short-term protection from moisture during the construction phase
- Available in 1¾" and 3½" thicknesses (1½" by special order), and depths from 3½" to 24"; for 3½" thickness or other depths, contact GP for availability
- Available in value lengths from 24′ to 48′ (lengths up to 60′ by special order)

GRADE	THICKNESS	DEPTH
2.0E	1¾", 3½"	7¼", 9¼", 9½", 11¼", 11⅞", 14", 16", 18", 24"

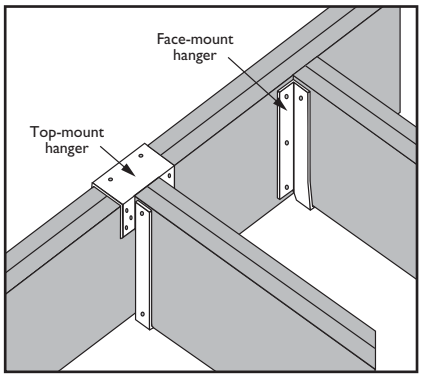

Lengths: up to 60 feet.
Referenced dimensions are nominal and used for design purposes.

GP LAM® LVL BEARING DETAILS

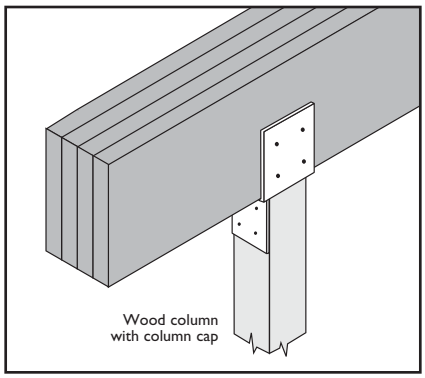

- Confirm the actual required bearing is provided by a support that has adequate strength to carry the load.
- Minimum bearing length for GP Lam LVL beams and headers is 1½" for end and 3" for intermediate bearings. Size bearing for applied loads.
- For fastening recommendations for multiple-ply GP Lam LVL members, see pages 47-48.

BEAM-TO-BEAM CONNECTION

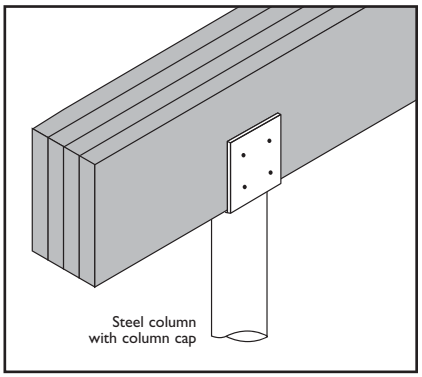

Hangers must be properly installed to achieve full capacity.

BEARING ON WOOD COLUMN

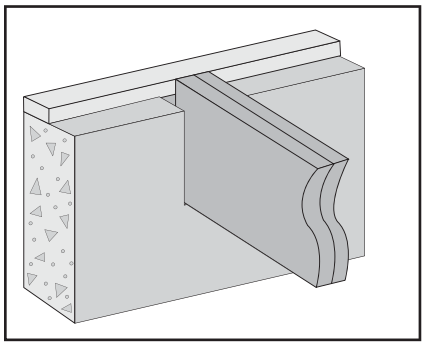

BEARING ON STEEL COLUMN

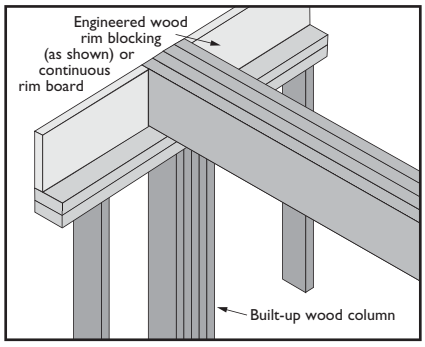

Where column caps are not used, side plates may be required for lateral restraint and/or load transfer. Consult designer of record. See tables on page 51 and 52 for column cap information.

POCKET IN CONCRETE OR MASONRY

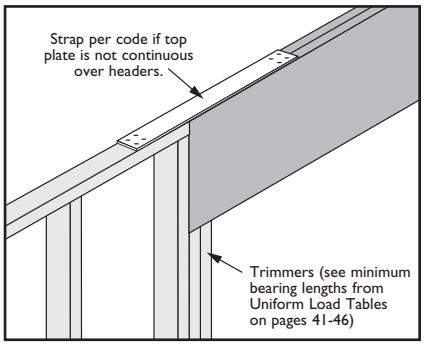

Prevent direct contact of GP Lam LVL with concrete or masonry, or protect per code. Consult local building code for additional requirements.

BEARING ON EXTERIOR WALL

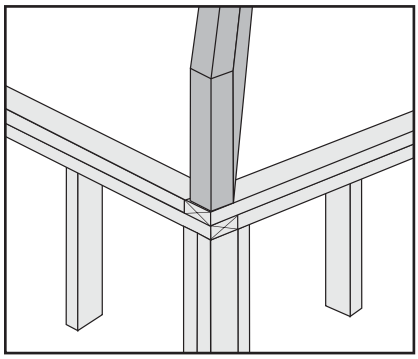

Consult local building code for requirements.

BEARING FOR DOOR OR WINDOW HEADER

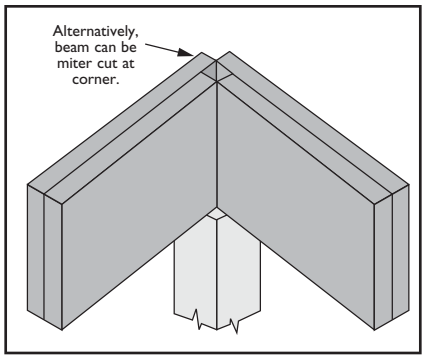

See "Bearing Length Requirements" on page 39.

LOW END HIP BEARING

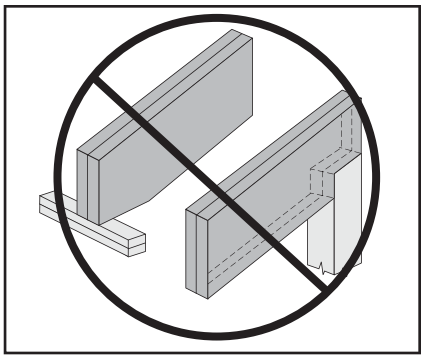

Hip beam must bear completely on plate or post. Seat cut must not extend past inside face of bearing.

HIGH END HIP BEARING

Hip beam must bear on post or in properly designed hanger or other connection.

SEAT CUT / NOTCHING

Seat cut must not extend past inside face of bearing. Do not notch beams at bearing.

GP LAM® LVL HANDLING & INSTALLATION

- GP Lam® LVL shall not be stored in direct contact with the ground and must be protected from weather. Provide air circulation under covering and around stacks of materials.
- Bundles must be stored level and must not be opened until time of installation.
- St ack and handle GP Lam LVL flatwise.
- Handlers and installers should use appropriate personal protective equipment such as gloves and goggles. An MSDS is available at www.buildgp.com.
- Engineered lumber must not be installed in direct contact with concrete or masonry construction or shall be protected per code and shall be used in covered, dry use conditions only (moisture content is less than 16%).
- Minimum bearing length for GP Lam LVL beams and headers: end bearing 1½", intermediate bearing 3". Size for applied loads.
- GP Lam LVL beams and headers must be restrained against rotation at ends and supports and the top (or compression edge) must be laterally supported by perpendicular framing or bracing at 24" on-center or closer.
- 1¾" GP Lam LVL beams deeper than 14" must only be used in multiple-piece members.
- Nails installed in the narrow face of GP Lam LVL shall not be spaced closer than 4" (10d common nails) or 3" (8d common nails).
- Multiple piece GP Lam LVL may not be stagger-spliced as is sometimes done with dimension lumber. If the required length of a multiple-span beam exceeds the available length of the LVL, the LVL beams must be installed so as to butt together over a common bearing.
- GP Lam LVL is manufactured without camber or specific vertical orientation. It may be installed with the identifying stamps on the side faces reading right side up or upside down.
- Strength and stiffness properties of GP Lam LVL exceed those of typical dimension lumber. It may be possible to substitute GP Lam LVL for dimension lumber roof members in code-prescribed conventional light-frame construction, but design of conventional construction is beyond the scope of this product guide and of Georgia-Pacific Engineered Lumber Technical Services.
- When nail type is not specified in this guide, use common, box or sinker.
- To help safeguard the structural integrity of connections with preservative or fire-retardant treated wood, use connectors and hardware as required by code and type of treatment.

  As a minimum requirement, hot-dipped galvanized coated fasteners should conform to ASTM Standard A 153 and hot-dipped galvanized coated connectors should conform to ASTM Standard A 653 (Class G-185). In demanding applications, or in highly corrosive environments, stainless steel fasteners and connectors should be utilized and may, in fact, be required by building codes.

  Most commonly available electroplated galvanized fasteners do not have a sufficient coating of zinc and are not recommended. Aluminum should not be used in direct contact with preservative treated wood. Never mix galvanized steel with stainless steel in the same connection.

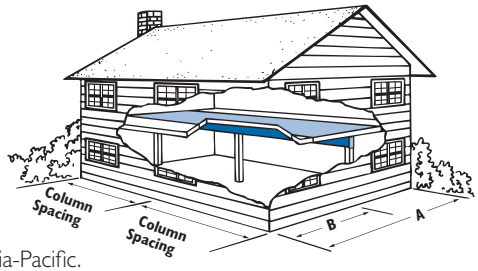

2.0E GP LAM LVL FLOOR BEAMS

This table shows the size (e.g.: 2–11¼" = 2 plies of 1¾"x11¼") of beams needed to support loads of one floor only, i.e., a second story floor or one story floor over a basement. (See drawing at right.)

When floor joists span continuously from wall to wall (not cut at beam) this table requires that "B" be not less than 45%, or greater than 55% of "A".

Example: If "A" = 32′, "B" must be between 14.4′ (32x.45) and 17.6′ (32x.55)

For non-conforming situations, use FASTBeam® analysis and selection software or contact Georgia-Pacific.

		COLUMN OR SUPPORT SPACING (CENTER-TO-CENTER)									
		11′	12′	13′	14′	15′	16′	17′	18′	19′	20′
TOTAL FLOOR JOIST SPAN "A"	24′	2-11¼" 3-9¼"	2-11¼" 3-9½"	2-11⅞" 3-11¼"	2-14" 3-11¼"	2-14" 3-11⅞"	2-16"+ 3-14"	2-16"+ 3-14"	2-18"+ 3-16"	2-18"+ 3-16"	2-18"+ 3-16"
	28′	2-11¼" 3-9¼"	2-11⅞" 3-11¼"	2-14"+ 3-11¼"	2-14"+ 3-11⅞"	2-16"+ 3-14"	2-16"+ 3-14"	2-16"+ 3-14"	2-18"+ 3-16"	2-18"+ 3-16"	3-16"
	32′	2-11¼"	2-14"+ 3-11¼"	2-14"+ 3-11⅞"	2-14"+	2-16"+ 3-14"	2-16"+ 3-14"	2-18"+ 3-16"	2-18"+ 3-16"	3-16"+	3-18"+
	36′	2-11⅞"+ 3-11¼"	2-14"+ 3-11¼"	2-14"+ 3-11⅞"	2-16"+ 3-14"	2-16"+ 3-14"	2-18"+ 3-14"	3-16"+	3-16"+	3-18"+	3-18"+
+ See note 2.	40′	2-11⅞"+ 3-11¼"	2-14"+ 3-11¼"	2-14"+	2-16"+ 3-14"	2-16"+ 3-14"	3-16"+	3-16"+	3-16"+	3-18"+	3-18"+

NOTES:

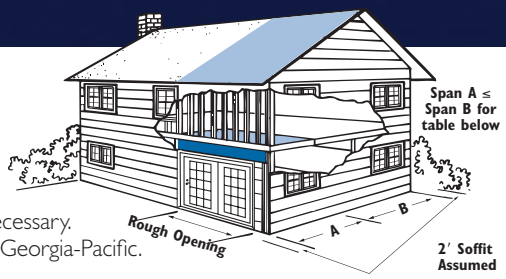

1. Table is based on continuous floor joist span and simple or continuous beam span conditions. If floor joists are not continuous above the beam, take the sum of the joist spans then multiply by 0.8. This is the total floor joist span to consider.
2. Required end bearing length (based on 565 psi) is 3.0" unless the subscript + is shown. In that case, 4.5" is required.
3. At intermediate supports of continuous spans, use the following guidelines or refer to page 39.
   - 7½" bearing length for beams requiring 3" bearing at the beam ends
   - 10½" bearing length for beams requiring 4½" bearing at the beam ends
4. All headers require full-width bearing support, e.g., 2x6 for 5¼", 3-ply members. The adequacy of supporting columns to be verified by others.
5. Table is based on residential floor loading of 40 psf live load and 12 psf dead load.
6. Live load reductions have been applied per IBC section 1607.9.1.
7. Deflection is limited to L/360 at live load and L/240 at total load.
8. For other uniform load conditions refer to pages 41-42.
9. A single 3½" thick ply can be substituted for any two 1¾" thick plies.
10. For multiple ply fasteners, see pages 47-48.

GP LAM®
LAMINATED VENEER LUMBER

2.0E GP LAM® LVL WINDOW AND PATIO DOOR HEADERS, 2-STORY

TWO-STORY APPLICATIONS

This table shows the size (e.g.: 2–11¼″ = 2 plies of 1¾″ x 11¼″) of beams needed to support the combined loads from a wall, second story floor (¼ of total floor joist span) and various roof truss spans with a 2′ soffit. If the soffit exceeds 2′, additional design is necessary. For non-conforming situations, use FASTBeam® analysis and selection software or contact Georgia-Pacific.

+ See note 1.	36′	1-9½″+ 2-7¼″	2-11¼″ 3-9¼″	2-11⅞″+ 3-11¼″	2-14″+ 3-11⅞″	2-18″+ 3-16″	2-9¼″ 3-7¼″	2-11¼″+ 3-9¼″	2-14″+ 3-11¼″	2-16″+ 3-14″	3-16″+	1-9¼″+ 2-7¼″	2-9½″ 3-9¼″	2-11¼″	2-14″+ 3-11¼″	1-9¼″+ 2-18″+ 3-14″	2-7¼″	2-11¼″ 3-9¼″	2-11⅞″+ 3-11¼″	2-14″+ 3-11⅞″	2-18″+ 3-16″

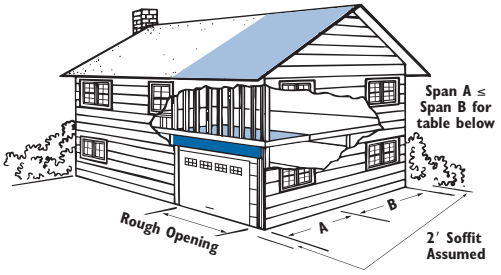

NOTES:

1. Required end bearing length (based on 625 psi) is 3.0″ unless the subscript + is shown. In that case, 4.5″ is required.
2. All headers require full-width bearing support, e.g., 2x6 for 5¼″, 3-ply members. The adequacy of supporting columns to be verified by others.
3. Table is based on residential floor loading of 40 psf live load and 12 psf dead load and exterior wall weight of 100 plf.
4. A beam line supporting the center of the second floor is assumed.
5. Deflection is limited to L/360 and the lesser of L/240 or 5/16″ at total load.
6. Roof live and dead loads shown are applied vertically to the horizontal projection.
7. When using a single ply 1¾″, consider the effect on hanger capacity, and the available bearing surface the LVL provides to other framing elements.
8. A single 3½″ thick ply can be substituted for any two 1¾″ thick plies.
9. For multiple ply fasteners, see pages 47-48.
10. This table does not address a brick loaded condition.

NOTES:

1. Required bearing length (based on 625 psi) is 3.0″ unless the subscript + is shown. In that case, 4.5″ is required.
2. All headers require full-width bearing support, e.g., 2x6 for 5¼″, 3-ply members. The adequacy of supporting columns to be verified by others.
3. Deflection is limited to L/240 at live load and L/180 at total load.
4. Roof live and dead loads shown are applied vertically to the horizontal projection.
5. When using a single ply 1¾″, consider the effect on hanger capacity, and the available bearing surface the LVL provides to other framing elements.
6. A single 3½″ thick ply can be substituted for any two 1¾″ thick plies.
7. For multiple ply fasteners, see pages 47-48.

NOTES:

1. 2′-0″ maximum roof overhang assumed.
2. Provide posts or wall at both ends to support reactions. Provide 5″ minimum bearing in the direction of the hip or valley at each end based on Douglas Fir-Larch or Southern Pine post or plate material. (For example, a 2x4 wall provides 5″ minimum bearing for a hip or valley rafter framing at a 45 degree angle to the wall.)
3. The building designer must consider thrust resistant connections at bearing locations.
4. For non-equal roof slopes, use the longest horizontal roof rafter span (L) and the greatest roof slope.
5. Table is based on triangular loading applied to the hip or valley member. Live load is calculated as applied vertically to the horizontal projection of the rafter and dead load is calculated along the rafter length.
6. Size is based on uniform roof snow applications with a load duration factor of 115% and deflection criterion of L/240 live load and L/180 total load.
7. Refer to pages 47-48 for fastening recommendations for multiple-ply members. Use the longest horizontal roof rafter span (L) to determine span-carried length for uniform loading.
8. Reactions shown include heaviest beam weight selected for load and slope conditions.
9. A structural ridge beam is assumed.
10. A single 3½″ thick ply can be substituted for any two 1¾″ thick plies.
11. Codes require that hip and valley beam depths be greater than or equal to the cut end of the rafter.

25,000								9″			8½″	6½″		8½″	5¾″	4¼″

NOTES:

1. Minimum required bearing length is 1½″ for end bearings and 3″ for intermediate bearings.
2. Bearing across full width of beam or header is required.
3. Table is based on moisture content being less than 16% for engineered lumber and not exceeding 19% for lumber.
4. Confirmation of structural adequacy of supporting member is required.
5. GP Lam LVL beams and headers must be restrained against rotation at ends and supports.
6. When plate material is of **Southern Pine graded non-dense** or of **SPF**, use bearing lengths shown for Hem-Fir .
7. When plate material is of **Douglas Fir-Larch** or **Douglas Fir-Larch (N)**, use bearing lengths shown for Southern Pine.
8. When GP Lam LVL rests **on steel or in a hanger**, use bearing lengths shown for GP Lam LVL.
9. No reduction in bearing length (no increase in bearing stress, $F_{c\perp}$) is allowed for duration of load.
10. For non-conforming situations, use FASTBeam® analysis and selection software or contact Georgia-Pacific.

ALLOWABLE HORIZONTAL HOLES IN GP LAM® LVL

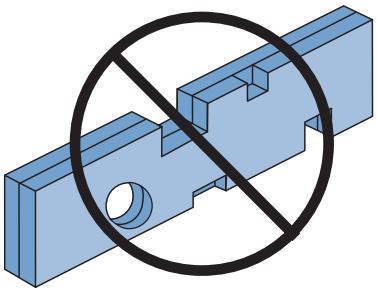

NOTES:

1. Hole(s) must be located completely in the allowable hole zone.
2. No rectangular holes are allowed.
3. No more than three holes allowed per span.
4. Table is valid for single and multiple span uniformly loaded beams only. Table is not valid for cantilever sections.
5. Hole location, clearance and the effects of beam deflection should be considered to avoid problems with piping.

ALLOWABLE HOLE SIZES

BEAM DEPTH	MAXIMUM ROUND HOLE DIAMETER
3½"-7"	¾"
7¼"-9¼"	1½"
9½"-16"	2"
deeper than 16"	3"

Do not notch, drill or cut GP Lam LVL except as shown in this publication.

USING ALLOWABLE UNIFORM FLOOR AND ROOF LOAD TABLES (Pages 41-46)

1. **Tables are based on uniform loads, the more restrictive of simple or continuous spans (measured center-to-center), and dry-use conditions (moisture content less than 16%).** Loads shown can be applied to the beam in addition to its own weight. For other loads or span configurations, use FASTBeam® analysis and selection software or contact your Georgia-Pacific representative.
2. Beam thickness is the net thickness of the beam. A single 3½" thick ply can be substituted for any two 1¾" thick plies. See pages 47-48 for multiple-ply member connection details.
3. To size a beam it is necessary to check both live load and total load. Selected beam must work in both rows. When no live load is shown, total load will control, unless floor live load deflections other than L/360 are checked per note 4.
4. For floor live load deflection limits of L/480 or L/600, multiply the value in the floor 'LL' row (or 'TL' when 'LL' is not shown) by 0.75 or 0.60 respectively.
5. To size a member for a span not shown, use capacities for the next larger span shown (example: for 7′ span, use values shown for 8′ span).
6. Verify deflection limits with local building code requirements.
7. Bearing across full width of beam is assumed.
8. Assumes 565 psi bearing stress limited by Douglas Fir, Southern Yellow Pine or other dense supporting material. For SPF or other less dense materials, either double the bearing length shown or refer to Bearing Length Requirements on page 39.
9. Bearing length may be adjusted if a beam is not fully loaded. For example, if 4.2" of bearing is required for a beam with maximum total load capacity of 1000 PLF yet the total design load is only 700 PLF the bearing length may be adjusted as follows: 700/1000 x 4.2 = 2.94" minimum (use 2 cripples for 3"). In no case may end bearing length be less than 1½" or intermediate bearing length less than 3".
10. Provide lateral support at bearing points, and continuous lateral support along the top (or compression edge) of beam.
11. **1¾" thick beams with depth greater than 14" must only be used in multiple-ply members.**
12. For 3-ply 1¾" (5¼") or 4-ply 1¾" (7") GP Lam LVL, use 1¾" table and multiply by 3 or 4 respectively.
13. Roof surface must slope a minimum of ¼/12 or as required for drainage.

EXAMPLE:

Select a 2.0E GP Lam LVL beam to carry 520 PLF live load + 200 PLF dead load. Beam supports both floor and roof, and spans 10′.

When a beam carries floor and roof, use tables for floor loads; these tables are based on more stringent criteria than those used for roof loads. Use the table titled Floor 100%, on pages 41-42. Adding 520 PLF and 200 PLF gives a total load of 720 PLF. Find 10′ in the left-most column. To the right are three rows showing Live Load L/360, Total Load and Minimum End and Minimum Interior Bearing requirements in inches. In the row marked Total Load, move to the right to locate a total load of at least 720 PLF. 1¾" x 11⅞" GP Lam LVL Beam can carry 745 PLF total load. Check live load capacity. 1¾" x 11⅞" can carry 629 PLF live load, so live load capacity is also adequate. Note required end bearing length is 3.8" and 9.5" for interior bearing of multiple spans. (See Note 9 above)

If less bearing length or a depth less than 11⅞" is desired, check the capacity of 3½" LVL beams. In the row marked Total Load, move farther to the right to locate a total load of at least 720 PLF. A 3½" wide x 9¼" deep member can carry 931 PLF total load. Check that live load capacity is at least 520 PLF. 3½" x 9¼" beams can carry 627 PLF, which is sufficient. Use 3½" x 9¼" deep. Required end bearing is 2.4" and 5.9" is required for interior bearing of multiple spans.

ALLOWABLE UNIFORM FLOOR LOADS (PLF) – 100%

(Can be applied to the beam in addition to its own weight.)

KEY TO TABLES

Live Load L/360 = Maximum live load — limits deflection to L/360

Total Load = Maximum total load — limits deflection to L/240

End / Int. Bearing = Required minimum end bearing (inches) for simple or multiple span beams and minimum interior bearing (inches) for multiple span beams based on plate bearing stress of 565 psi.

See "Using Allowable Uniform Floor and Roof Load Tables," page 40.

ALLOWABLE UNIFORM FLOOR LOADS (PLF) – 100%

(Can be applied to the beam in addition to its own weight.)

KEY TO TABLES

Live Load L/240 = Maximum live load — limits deflection to L/240

Total Load = Maximum total load — limits deflection to L/180

End / Int. Bearing = Required minimum end bearing (inches) for simple or multiple span beams and minimum interior bearing (inches) for multiple span beams based on plate bearing stress of 565 psi.

See "Using Allowable Uniform Floor and Roof Load Tables," page 40.

ALLOWABLE UNIFORM ROOF LOADS (PLF) – 125% (NON-SNOW)

(Can be applied to the beam in addition to its own weight.)

KEY TO TABLES

Live Load L/240 = Maximum live load — limits deflection to L/240

Total Load = Maximum total load — limits deflection to L/180

End / Int. Bearing = Required minimum end bearing (inches) for simple or multiple span beams and minimum interior bearing (inches) for multiple span beams based on plate bearing stress of 565 psi.

See "Using Allowable Uniform Floor and Roof Load Tables," page 40.

FASTENING REQUIREMENTS

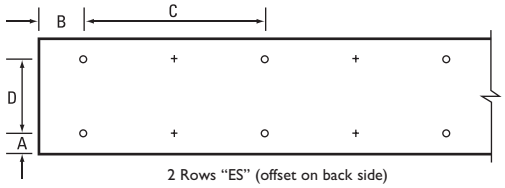

GENERAL NOTES:

1. Confirm the adequacy of the beam (depth and thickness) for carrying the designated load.
2. Stress level for nail, bolt and screw values is 100%. Increases of 15% for snow loaded roof conditions or 25% for non-snow roof conditions are permitted.
3. Top and bottom rows of fasteners should be as shown in the fastener clearances detail. For staggered fastening patterns, the maximum end distance applies to all rows.
4. All fasteners must have the length fully embedded, but must not be over-driven, countersunk, or over-tightened.
5. Bolt holes are to be 1/32″ to 1/16″ diameter larger than the bolts. Bolts must meet or exceed ASTM A 307 or SAE J429 Grades 1 or 2. Every bolt must extend through the full thickness of the member. Use washers not less than a standard cut washer under the head and nut meeting ANSI B 18.22.1.
6. 7″ wide beams should only be side-loaded when loads are applied to both sides, when the lesser side load plf is at least 25% of the opposite side, or when the beam is otherwise restrained to minimize rotation.
7. For beam depths <7¼″, the maximum beam thickness must not exceed the beam depth and all fasteners must be staggered up to one-half the required o.c. spacing. For depths ≥7¼″, the maximum beam thickness is 7″.
8. Fastening recommendations are based on the 2012 National Design Specification for Wood Construction (NDS) or fastener manufacturer's design information.
9. SDS structural screws are produced by Simpson Strong-Tie Company, Inc., WS structural screws are produced by United Steel Products Company, and TrussLok® structural screws are produced by FastenMaster-OMG, Inc. Structural screws must be installed per manufacturer's recommendations.

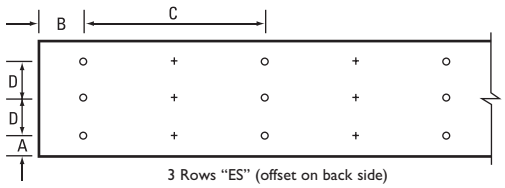

FASTENER CLEARANCES FOR MULTIPLE-PLY MEMBERS

FASTENER	A	B		C		D
	MIN.	MIN.	MAX.	MIN.	MAX.	MIN.
10d & 16d Nails	2″	2″	6″	4″	12″	3″
Bolts & Screws	2″	4″	12″	4″	24″	3″

Spacings closer than those above may be acceptable, but require special consideration. Contact your technical representative.

5″ TrussLok		-	2 rows @ 24″ o.c.		-		
6¾″ TrussLok		-	-		2 rows @ 24″ o.c.		

NOTES:

1. All fasteners must meet the minimum requirements in the table above. Side-loaded multiple-ply members must meet the minimum fastening and side-loading capacity requirements given on page 48.
2. Minimum fastening requirements for depths less than 7¼″ require special consideration. Please contact your technical representative.
3. Three general rules for staggering or offsetting for a certain fastener schedule:
   (1) if staggering or offsetting is not referenced, then none is required;
   (2) if staggering is referenced, then fasteners installed in adjacent rows on the front side are to be staggered up to one-half the o.c. spacing, but maintaining the fastener clearances above; and
   (3) if "**ES**" is referenced, then the fastener schedule must be repeated on each side, with the fasteners on the back side offset up to one-half the o.c. spacing of the front side (whether or not it is staggered).

TOP-LOADED

For required multiple-ply member fastening, only conditions where the loading is applied evenly across the top of all plies shall be considered "top-loaded." All other conditions must be fastened using the side-loaded recommendations on page 48. All top-loaded multiple-ply LVL members must meet the **minimum fastener requirements** and required fastener spacing shown above.

FASTENING REQUIREMENTS (CONTINUED)

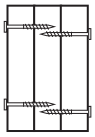

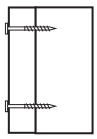

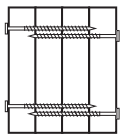

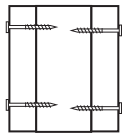

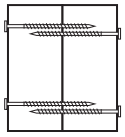

2.0E GP LAM® LVL SIDE-LOADED

For required multiple-ply member fastening, conditions where the loading is not applied evenly across the top of all plies shall be considered side-loaded. All side-loaded multiple-ply members must meet the **minimum fastener requirements** on page 47 **and** the loading capacity requirements below.

MAXIMUM UNIFORM LOAD APPLIED TO EITHER OR BOTH OUTSIDE PLIES (PLF)

Refer to General Notes page 47.

- Numbers in the table indicate load in pounds per lineal foot which may be applied to either side, except as shown in note 6 on page 47, based solely on the connection.
- Framing members must be attached with approved metal hangers. Refer to pages 27, 51 and 52 for hanger recommendations.
- This table applies to uniform loading only. Concentrated (point) side loads may require additional consideration.

		16	—	—	—	580	580	870

NOTES:

1. "**ES**" indicates fasteners must be installed from **each side** of the beam with the given fastening schedule. Stagger fasteners on opposite side of beam by up to one-half the required fastener on-center spacing.
2. For nails, tabulated values may be multiplied by 2.0 for 6" o.c. spacing and by 3.0 for 4" o.c. spacing. For bolts, tabulated values for 24" o.c. may be multiplied by 2.0 for 12" o.c. spacing. For structural screws, tabulated values for 24" o.c. may be multiplied by 2.0 for 12" o.c. spacing, by 4.0 for 6" o.c. spacing and by 6.0 for 4" o.c. spacing.
3. For 3 rows of fasteners, multiply tabulated values for 2 rows by 1.5. Center and stagger middle row by one-half the required o.c. spacing for depths less than 11¼".
4. Do not use fastener schedule if fastener clearances, required staggering and offsetting, or required fastening cannot be met. Consult technical representative for other options.

NOTES:

1. Prior to using this table, beam size must be checked by tables or FASTBeam® software.
2. Table can also be used for 1¾", 5¼" and 7" thick GP Lam LVL beams
   For 1¾" thick beam: 0.5 x allowable reaction (lbs)
   For 5¼" thick beam: 1.5 x allowable reaction (lbs)
   For 7" thick beam: 2.0 x allowable reaction (lbs)
3. Provide lateral support at bearing points, and continuous lateral support along top (or compression edge) of beam.
4. Listed values are for 2.0E GP Lam LVL beam products.
5. Special consideration is required for uplift reactions.
6. Concentrated loads, holes, and other notches are not allowed in the tapered cut region.
7. Southern Pine bearing plate assumed (565 psi).
8. Values are for floor use, 100% duration of load increase.
9. If "Max." is shown in Reaction column, full capacity is available.
10. If no allowable reaction is shown, beam will not work with current input; try using a shallower beam with additional plies.
11. Field verify slope and all dimensions.
12. ¼" butt cut height assumed for truss bottom chord.

* Capacity is maximum capacity of the USP column cap.
** Adequacy of column to be verified by others.

NOTES:

1. Capacity is for the stated duration of load—100% floor loading. Hanger capacity depends on the hanger selected, quantity and size of fasteners used, and the size and type of support to which it is fastened. **Hanger capacities shown are based on attachment to LVL header material using the hanger manufacturer's recommended fastening. Minimum header thickness is 3½″.** Some hanger/header/fastener combinations may not meet maximum beam capacities and a qualified designer should be consulted. Before selecting hangers, please refer to the appropriate reference/design guide from the hanger manufacturer for expanded design information. Many other designs are available for specialized applications.
2. Model numbers shown are for United Steel Products Company, Inc. and Simpson Strong-Tie® Company, Inc. Contact your local building material supplier for connector availablility.
3. Special consideration is required with top mount hangers on nailers. Refer to the hanger manufacturer's catalog for reduced capacity.

GP LAM® LVL BEAM AND HEADER DESIGN PROPERTIES

1¾" 2.0E GP LAM LVL ALLOWABLE EDGEWISE DESIGN PROPERTIES[A]

DEPTH[B]	EI (10^6 INCH^2 LBS)	MAXIMUM RESISTIVE MOMENT (FT-LBS)			MAXIMUM VERTICAL SHEAR (LBS)			WEIGHT (LBS/FT)
		100%	115%	125%	100%	115%	125%	
7¼"	111	3918	4506	4898	2411	2772	3013	3.4
9¼"	231	6208	7139	7760	3076	3537	3845	4.4
9½"	250	6529	7508	8161	3159	3633	3948	4.5
11¼"	415	8985	10333	11231	3741	4302	4676	5.3
11⅞"	488	9951	11444	12439	3948	4541	4936	5.6
14"	800	13581	15618	16976	4655	5353	5819	6.6
16" [B]	1195	17477	20098	21846	5320	6118	6650	7.6
18" [B]	1701	21831	25106	27289	5985	6883	7481	8.5
24" [B]	4032	37591	43229	46988	7980	9177	9975	11.4

A. Table assumes beam has lateral support at bearing points and continuous lateral support along the compression edge of the beam.

B. 1¾" beams deeper than 14" must only be used in multiple-ply members.

2.0E GP LAM ALLOWABLE EDGEWISE DESIGN STRESSES[1]

Modulus of Elasticity	E	= 2.0 x 10^6 psi[2]
Shear Modulus of Elasticity	G	= 125,000 psi
Flexural Stress	F_b	= 2,900 psi[3]
Horizontal Shear	F_v	= 285 psi
Compression Perpendicular to Grain	$F_{c\perp}$	= 845 psi[2]
Compression Parallel to Grain	F_{cII}	= 2,600 psi
Equivalent Specific Gravity	SG	= 0.50

1. Allowable design stresses apply to depths as small as 3½" ripped from any depth of beam.
2. No increase is allowed to E, G or $F_{c\perp}$ for duration of load.
3. For depths (d) other than 12" multiply F_b by $(12/d)^{1/9}$.
4. When calculating deflection, both bending and shear deformations must be included. The deflection equation for a simply-supported beam under uniform load is:

$$\Delta = \frac{270\ w\ L^4}{E\ b\ h^3} + \frac{28.8\ w\ L^2}{E\ b\ h}$$

Where: Δ = estimated deflection, inches; w = uniform load, plf; L = span, feet; E = tabulated modulus of elasticity, psi; b = beam width, inches; h = beam depth, inches

For other spans or loading conditions, see engineering references or use design software.

GP LAM®
LAMINATED VENEER LUMBER

GP LAM® LVL ARCHITECTURAL SPECIFICATIONS

Part 1— General

1.0 — Description

A. Work in this section includes, but is not limited to:
Laminated Veneer Lumber (LVL) beams and headers.

B. Related work specified elsewhere:
Rough carpentry.

1.1 — Submittals:

A. Product data:
Submit manufacturer's descriptive literature indicating material composition, thicknesses, dimensions, loading and fabrication details.

B. Shop drawings:
Submit manufacturer's literature indicating installation details. Include locations and details of bearing, blocking, bridging and cutting for work by others.

1.2 — Quality Assurance:

A. Certification:
All GP Lam® LVL has been qualified to ASTM D 5456 by APA-The Engineered Wood Association.

1.3 — Delivery, Storage and Handling:

A. Delivery:
Deliver materials to the job site in manufacturer's original packaging, containers and bundles with manufacturer's identification intact and legible.

B. Storage and handling:
Store and handle materials to protect against contact with damp and wet surfaces, exposure to weather, breakage and damage. Provide air circulation under covering and around stacks of materials.

1.4 — Limitations:

A. Cutting:
Except for cutting to length, GP Lam LVL beams and headers shall not be cut, drilled or notched, except as noted in manufacturer's literature.

B. Moisture conditions:
GP Lam LVL is for use in covered, dry-use conditions only (moisture content less than 16%).

Part 2 — Products

2.0 — Prefabricated wood beams and headers:

A. Acceptable products: 2.0E

1. Georgia-Pacific, GP Lam LVL floor and roof beams.
2. Georgia-Pacific, GP Lam LVL window and door headers.

B. Characteristics:

1. Construction:
1¾″ and 3½″ thick pressure bonded, lap-jointed wood veneers, with grain of veneers running parallel in the long direction.
2. Standard beam sizes:
2.0E–1¾″ x 7¼″, 9¼″, 9½″, 11¼″, 11⅞″, 14″, 16″, 18″, 24″
As required for loading, deflection and span.
3. Beam length:
As required for span and bearing.

2.1 — Accessories:

A. Fasteners:
16d common nails, approved structural screws or ½″ bolts.

B. Hangers:

1. Contact GP or an engineer for acceptable connectors.

Part 3 — Execution

3.0 — General:

A. Provide GP Lam LVL beams and headers where indicated on drawings using hangers and accessories specified.

B. Install GP Lam LVL beams and headers in accordance with manufacturer's recommendations.

3.1 — Accessories:

Install accessories where indicated and in accordance with beam and header manufacturer's instructions.

SALES, UPDATES AND CURRENT INFORMATION

The sale of our engineered lumber products is subject to our terms of sale which are available at www.gp.com/tc or upon request. The information in this document may change without notice. Visit our website at www.buildgp.com for updates and current information or call 877-437-9759 to request a current copy.

GENERAL

The user is responsible for proper installation of our engineered lumber products. Our engineered lumber products must be installed in strict conformity with our instructions and all applicable building code requirements and other regulations. In addition, if not specifically covered by our installation instructions or construction detail illustrations, the products must be installed in accordance with generally accepted design and construction practices. When installing engineered lumber products, the user must also consider the effects of local climate and geography. We do not warrant and are not responsible for the design and construction of any finished structure or system into which our engineered lumber products may be incorporated or other building components that may be used with our products.

LIFETIME LIMITED WARRANTY

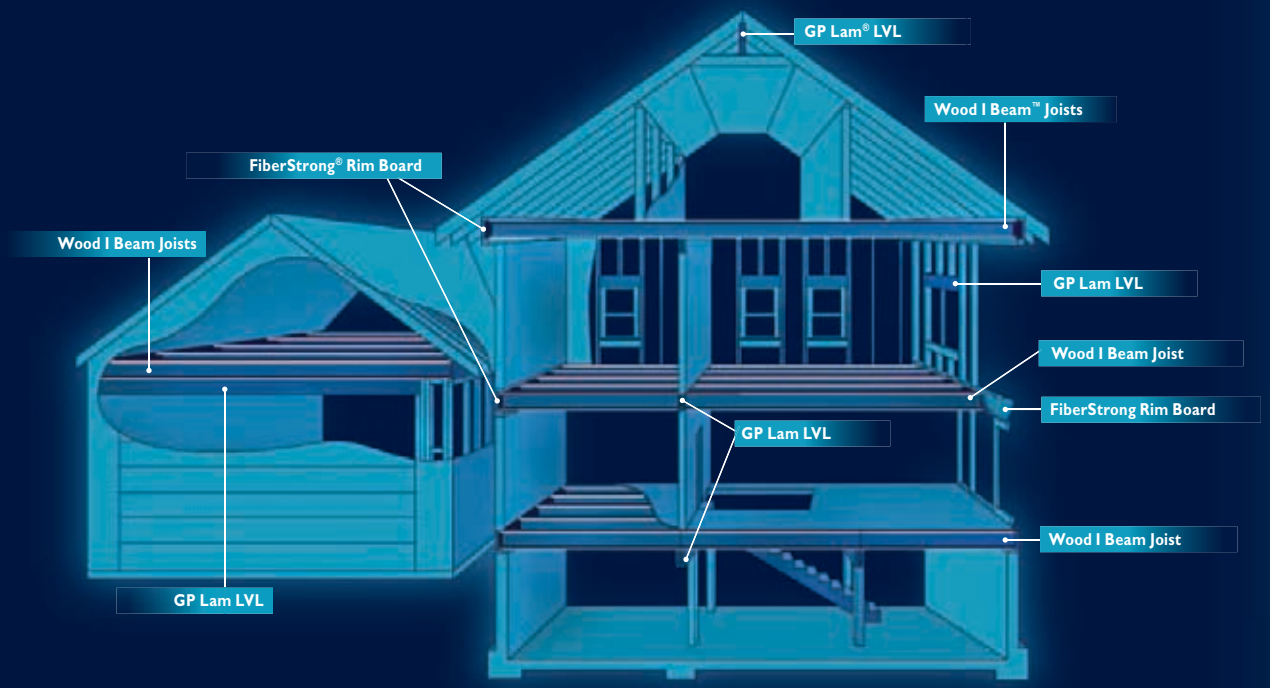

Georgia-Pacific engineered lumber products are covered by a lifetime limited warranty. For complete warranty details, terms and conditions, please visit www.buildgp.com or call 877-437-9759.

HEALTH AND SAFETY CAUTION

Georgia-Pacific engineered lumber products are manufactured with one or more of the following adhesives: phenol-formaldehyde, phenol-resorcinol-formaldehyde, melamine, polyurethane emulsion polymer, isocyanate and/or polyurethane. Georgia-Pacific engineered lumber products contain no added urea formaldehyde resins. A Material Safety Data Sheet (MSDS) containing potential physical and health hazard information is available from your employer or by contacting the Products Safety and Health Information Department at Georgia-Pacific LLC, P.O. Box 105605, Atlanta, GA 30348-5605, 404-652-5119 or visit www.buildgp.com.

ENGINEERED FOR PERFORMANCE

WHAT YOU DON'T SEE MATTERS™

GP WOOD I BEAM™ joists

GP GP LAM® LAMINATED VENEER LUMBER

GP FIBERSTRONG® RIM BOARD

GP GP Glulam

When it comes to floor joists, rim board, beams and headers, builders and contractors choose Georgia-Pacific engineered lumber for many reasons. Today's residential building trends call for large, open spaces and high ceilings, creating a demand for products that provide higher strength and greater stability over longer spans.

Georgia-Pacific engineered lumber products are covered by a lifetime limited warranty. **For complete warranty details, terms and conditions, please visit www.buildgp.com or call 877-437-9759.**
