

A Premium Quality Duvet for Better Sleep

The only piece of bedding that provides comfort and stability is a duvet. Woods fine linens bring you the most reliable guide to buying a premium duvet for comfortable nights.

Check these parameters before buying a **Duvet**

Tog

The higher the tog, the warmer it will be. Woods duvets usually come in 1.5 tog and last up to 15 tog. To ensure that the duvet is warm, insulated and suits the purpose for which you are buying, stress on tog rating.

Fillings

There are two types of fillings in a duvet - natural and synthetic. The natural filling is comparatively softer, warmer and breathable. Synthetic fillings are microfibre fillings made with polyester and are named "soft as down duvets".

Duvet Build-up

Box stitch or baffle stitch ensures that the filling is evenly spread and stays in the duvet. Without stitching, the filling might accumulate to one portion with inertia, leaving the other portion empty and chilly. Either way, each section is sewn in a cross pattern to create cubes.

A Premium Quality Duvet

Some homemade duvets exude all the premium qualities that a duvet can possess. A premium quality duvet is a soft, breathable and light piece of bedding generously filled with premium natural fillings and cascaded in satinized cotton fabric.

Conclusion

Browse through a collection of premium duvets and **duvet sets** from the woods from double bed duvets to king-size, queen and kids bed duvets. With Woods, take a decision to be proud of.
