Connectivity Services
Peach Technologies

Access to reliable and fast internet connectivity is essential to businesses in today's world. A successful organisation must always be connected.

We understand how vital connectivity is and that any loss in connection has a massive impact. We provide a full range of connectivity options, whether a standard fibre broadband package or a dedicated ethernet connection, you'll receive reliable business connectivity and professional UK based customer services.

"Friendly and Helpful"

"We highly recommend Peach to any business, excellent customer service and friendly, helpful staff. We've received fantastic assistance and guidance from the smooth installation to now, 12 months on. Well done Peach."

Peach Technologies
'Making technology simple'

Why choose Connectivity

From Peach Technologies?

Connectivity Services:

Superfast Broadband

A cost-effective way for companies to stay connected without compromising on service quality.

Dedicated Ethernet

A dedicated, fixed-bandwidth, connection that delivers uncontested business-grade high-speed data connectivity over fibre optic cables.

WAN & MPLS

A highly scalable solution designed for organisations that anticipate growth and connectivity management of multiple locations.

“Issues Resolved Quickly”

“Having used Peach for quite a few years, I can safely say the service I receive is excellent. Staff are still polite and courteous and technical issues are resolved quickly. I highly recommend their services.”

Andrew Gunningham
Bristol Funeral Directors

Connectivity Services include:

Converged and assured solutions. Perfect for business requirements such as Voice.

Unlimited downloads and unmetered speeds.

Military grade security, and 24/7 monitoring.

Proactive resolutions, our UK helpdesk identifies and resolves issues before they impact your business.

Quick, easy and hassle-free installation.

Pre-configured and fully managed hardware.

Premium grade wireless routers.

“Real Pleasure”

“Doing business with Peach has been a real pleasure over the past few years. Thanks again.”

Phil Taylor
MoatHouse Surgery

Business Grade Superfast Broadband

Built to deal with the requirements of demanding organisational connectivity needs. Our portfolio of broadband solutions is evolving all the time as technology changes. We work with you to look at connectivity options and identify the one which will best suit your needs.

Ethernet

Never compete for bandwidth again

Our service provides a cost-effective and high-capacity connection. You will enjoy ultra-fast speeds and network stability. We deliver fast and reliable speeds with prioritised traffic by ensuring applications which need higher bandwidth, such as video conferencing, always have priority. Our ethernet supports VoIP connections and cloud-based services and is scalable, so as your business requirements change, your connection will evolve.

Unrivalled network quality and reliability

Supplying high-speed Ethernet (network) and IP telephony together means exceptional end-to-end service for customers.

Cost Saving through convergence

Voice communications and internet over a consolidated, Quality of Service enabled network, giving significant savings and performance quality.

Bandwidth

Our Ethernet offering comes with bandwidth levels from 10MB to 1GB.

Guarantee

Uncontended bandwidth will enable your business to work to its maximum potential.

High-performance connections

Ideal for business applications that need assured throughput across a high-performance and low-latency network.

Robust SLA's

Customers receive fixing of faults on the circuit within 7-8 clock hours. Ethernet circuits are fully managed 24/7, so many potential problems are found and resolved without a customer experiencing a problem. Peach has a 99.9% availability service level.

"Valuable Resource"

"Their enduring patience, professionalism and practical advice make them a valuable resource."

Benefits of WAN & MPLS SIP for Business

MPLS WAN Service enables customers to use a single network for their data, voice, video and business applications. Our MPLS WAN provides the foundation that connects your datacenters, corporate headquarters, and branch offices to the business applications needed for success.

Features:

- ➔ **Performance & Security**
The speed of information transferred between sites will rapidly improve within an MPLS network. Data will not be sent over the Internet and therefore will not require encryption/decryption. Lower packet loss means faster response for applications.
- ⬆ **Productivity**
Business critical traffic (e.g. CRM) performs more efficiently within an MPLS network, improving service levels, staff outputs and customer experience.
- 🛡 **Resilience & Reliability**
If a major link in the MPLS network goes down, traffic will quickly route to an alternative path. Therefore network downtime is greatly reduced.
- 🔗 **Scalability**
When your business grows, new sites, remote workers and applications can be rapidly configured and deployed onto your MPLS network with minimal effort and cost.
- 👤 Share servers and network across staff.
- 🔒 Military grade security for confidential data.
- 🖨 Share printers across all of your sites.
- ✅ Zero restrictions on fixed IP address.
- 🛡 Reliable and resilient with 99.9% service level agreements.
- 🔧 Build internal organisation networks.
- 🌐 Multiple sites act as one network.
- ⚙ Manage traffic and data surges.

Based in Fareham, Hampshire. Peach Technologies is a specialist business technology company with expertise in IT, Cloud, Connectivity and Telecoms; we have been listed on The Sunday Times Tech Track 100 and Deloitte Technologies Fast 50.

Priding ourselves on 'making technology simple' means customers receive reliable connectivity solutions and services that always work.
