Types of Floor Tiles

Floor tiles are a popular choice for homeowners in the UK due to their durability, versatility, and aesthetic appeal.

Ceramic Tiles: Ceramic tiles are made from clay that is fired at high temperatures. They come in a wide range of colors, patterns, and finishes, making them suitable for any style of decor. Ceramic tiles are known for their water resistance and durability, making them ideal for high-moisture areas like bathrooms and kitchens.

[Porcelain Tiles:](#) Porcelain tiles are similar to ceramic tiles but are denser and more resistant to water absorption. They are extremely durable and can withstand heavy foot traffic, which makes them suitable for both residential and commercial applications. Porcelain tiles are available in various textures and finishes, including polished, matte, and textured surfaces.

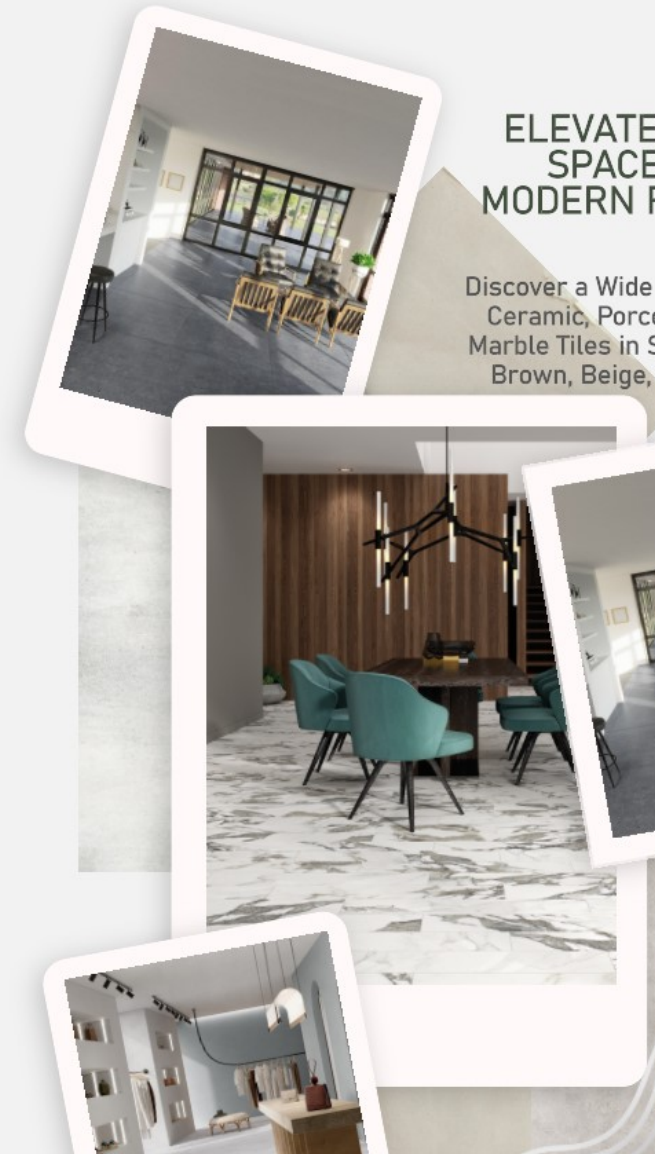

[Natural Stone Tiles:](#) Natural stone tiles, such as marble, granite, limestone, and slate, add a touch of elegance and sophistication to any space. Each type of natural stone has its own unique texture, color variations, and natural patterns. While they require regular sealing and maintenance, natural stone tiles are highly durable and can last for many years.
