

MULTIFLY 4G

Concept:

MultiFly 4G is designed for two purposes:

1. To make your existing equipment IoT ready
2. Serve as a Controller plus DAQ Device

MultiFly 4G has:

- 4 Analog Inputs to read 0-10V or 4-20mA
- 16 Configurable Digital I/O & PWM
- Ethernet/ModBus to read your other equipment
- On-board RTOS to handle Automation Logic
- 4G Modem that can upload data to Microsoft Azure or Amazon AWS and receive commands from you
- SD Card to buffer data
- WiFi, USB, Serial Port
- Optional battery back-up

We have other models such as MultiFly 4G D, MultiFly 4G + and MultiFly 4G E with same concept but different DAQ configuration. It's all industrial grade with 2 years of warranty from us. We supply web interface and Apps (both Android App and iOS App) with this instrument. We have an expert team of software developers to build complete IoT solution with custom-designed website, Apps, SCADA or any applications based on .Net, LabVIEW or Java. You are free to use this device with any application you find it suitable for.
