

STEAM VS. DRY

CARPET CLEANING

STEAM CARPET CLEANING

This method uses only hot water and chemicals. The machine sprays detergent onto the carpet which interacts with the hot water and after that is vacuumed up immediately. It is recommended for more stubborn stains that require deep cleaning, the only thing is that it takes a number of hours to dry.

DRY CARPET CLEANING

Despite its name, dry carpet cleaning uses some moisture which complement the dry chemicals placed on the carpet. The role of these chemicals is to break down whatever soil they find. It is more of a chemical clean, but it is ideal if the carpet needs to be used right away or if you need light clean.

Cleaners Nottingham offer both carpet steam cleaning and dry carpet cleaning and they know how to get the best results regardless of the method being used. For more info: <http://www.nottingham-cleaners.co.uk/carpet-cleaning-nottingham.html>
